

# Pass Your Nurse OSCE First Time

Specifically designed for overseas nurses taking the NMC Test of Competence and gain admission to the U.K. Nursing register. The syllabus prepares candidates for the OSCE, with the specific practical skills and theoretical knowledge they need to pass.

We are experienced OSCE trainers who are both NHS nurses, we've used the OSCE teaching from outstanding Trusts and condensed it into a short intense course. We use pre-course work, ongoing support and homework should you need it after the course has finished. This keeps costs down for nurses, while not compromising on pass rates.

This is the ultimate short course preparation, with experienced OSCE trainers who only teach in a hospital skills lab, with the equipment you'll find on the day of your OSCE.

We have found that repeat mock testing APIE and clinical scenarios, gives each nurse the skills and confidence they need to achieve the OSCE competencies necessary to pass first time.

- Basic life support
- Aseptic technique
- Male and female catheterisation
- IM injection
- Peak flow
- Medicine management
- All parts of documentation
- Mock APIE exam
- Homework
- Whatsapp support groups

Our after-course care is a unique feature in the world of OSCE training, as is our passion in you passing the exam.

We teach in small classes of 12 students and two OSCE trainers so each nurse gets the one to one help they need.
